CSDLs and descriptions: 180 182

C-ADD_HUNT_MEMBER	Adds another member to an existing hunt group
C-ADD_LH_SERVICE	Initializes a hunt group with one or more members
C-ADD_SERIES_MEMBER	Adds another member to an existing series-completion hunt group
C-ADD_VIRTUAL_ECF	Initializes a single line with virtual enhanced call forwarding service
C-CHANGE_BILL_MODE	Changes from flat rate to measured rate or vice versa
C-CHANGE_DIAL_MODE	Changes from dial pulse to touch call or vice versa
C-CHANGE_EQUAL_ACCESS	Changes long distance carrier(s)
C-CHANGE_FEATS	Modifies an existing service by adding or deleting features
C-CHANGE_HUNT_GROUP_SIZE	Changes the maximum size of a hunt group
C-CHANGE_HUNT_LNI	Changes line equipment for a member of a hunt group
C-CHANGE_HUNT_MEMBER_TDN	Changes the telephone number for a member of a hunt group
C-CHANGE_LINE_EQUIPMENT	Changes line equipment for an existing service
C-CHANGE_LINE_LOAD_CNTL	Changes the parameter that controls priority in service restoration after an outage
C-CHANGE_RCF	Changes the remote call forwarding number for an existing service
C-CHANGE_RING_CODE	Changes the ringing frequency for an existing service

FIG. 10A

C-CHANGE_RSOU	Changes the originating routing indicator
C-CHANGE_SMART_RING	Changes the distinctive ringing (teen) number
C-CHANGE_TDN	Changes the telephone number
C-CLEAR_LNP_TRIGGER	Clears the local number portability indicator
C-DELETE_HUNT_GROUP	Deletes a hunt group
C-DELETE_HUNT_MEMBER	Deletes a member of a hunt group
C-DELETE_LINE	Deletes a single line
C-DELETE_LNP_PORT	Deletes a line and sets an indicator that the telephone number is ported to another switch
C-DELETE_SERIES_MEMBER	Deletes a member of a series-completion hunt group
C-DEL_LH_SERVICE	Deletes a hunt group and all of its members

184

FIG.10B

180 182

C-DEL_VIRTUAL_ECF	Deletes a service with virtual enhanced call forwarding
C-INIT_EDT_LINE	Initialize an express dial tone service (left-in-place vacant line)
C-INIT_HUNT_GROUP	Initialize a hunt group
C-INIT_HUNT_GROUP_PILOT	Initialize a hunt group pilot
C-INIT_NON_HUNT_LINE	Initialize a single line service
C-INIT_OPERATOR_INTCPT	Initialize operator intercept service
C-LINK_HUNT_GROUP	Connect two hunt groups together
C-LINK_SERIES_MEMBER	Connect one member of a series-completion hunt group to another member
C-MODIFY_LH_SERVICE	Modify the members of an existing hunt group
C-RAW_COMMAND	Send an already-generated command
C-REMOVE_OPERATOR_INTCPT	Remove a telephone number from operator intercept service
C-RESTORE_CARRIER	Restore long distance service to a single line after it was suspened
C-RESTORE_HUNT_GRP_LOCAL	Restore local service to a hunt group after it was suspended
C-RESTORE_LOCAL	Restore local service to a single line after it was suspended
C-SET_LNP_TRIGGER	Change a service from working to ported out status
C-SUSPEND_CARRIER	Suspend long distance service for a single line
C-SUSPEND_HUNT_GRP_LOCAL	Suspend local service for a hunt group
C-SUSPEND_LOCAL	Suspend local servive for a single line
C-UNLINK_HUNT_GROUP	Disconnect two hunt groups

FIG 12A

CSDL Description:

This CSDL deletes a working service. The first ASDL is executed if the Smart Ring number is present on the Work Order, and determines the switch type. If the switch is a DMS-100, it sets the DMS100_SR parameter, which causes the second ASDL to be executed. If the switch is a 5ESS, it sets the 5ESS_SR parameter, which causes the third ASDL to be executed. For other switch types, it is not necessary to delete the Smart Ring number explicitly.

The second ASDL deletes the Smart Ring number if the switch is a DMS-100 and the Smart Ring number is defined. The third ASDL deletes the Smart Ring number if the switch is a 5ESS and the Smart Ring number is defined. The fourth ASDL deletes the line, and is always executed.

FIG 12B

DETERMINE_SR

```
# This state table prepares data for determining
# if SMARTRING is present
# It sets the SR parameter which causes the A-ADD_SMART_RING
# ASDL to be executed in C-INIT_NON_HUNT_LINE
# It also sets the DMS100_SR parameter which causes
# the A-DELETE_SMART_RING ASDL to be executed
# in C-DELETE_LINE (for DMS100 only)
# This command determines switch type based on CLLI
# code.
